github.com/IntouchKtakizawa

Year 10 IGCSE student and indie software developer interested in software and AI. I build web and mobile projects with AI assistance, drawing on my interests in music and everyday problems. Seeking job shadowing or work experience with DNA Maker to learn how a professional development team builds, tests and improves software.

Education

Satit Prasarnmit International Programme (SPIP), Bangkok

Year 10 - studying IGCSE, including Computer Science, Mathematics (Extended), Physics, Chemistry, Biology and First Language English.

Selected software projects

StageWrite Studio Browser songwriting workspace with editable chords, instrument views, Web Audio playback and MIDI / MusicXML export. Uses local theory rules and browser storage.

KineticForm Workout planner and tracker using React Native, Expo and TypeScript. Includes set logging, local persistence and optional Google Calendar scheduling.

JARVIS Personal AI assistant with a browser UI and local Node.js backend. Explores model tool calling, saved conversations, notes and local voice features.

DebateAI Next.js / TypeScript debate workspace with round history, timed speeches and validated model responses. Live AI requires Ollama or a local provider bridge.

Little World / AI Town JavaScript and Canvas simulation with resident routines, relationships, city-building and local saves. Current behavior uses rules rather than a language model.

Midpoint Web project exploring fair meeting points using OpenStreetMap and OSRM travel-time routing.

Development and team experience

Independent projects and websites - Develop personal software with AI assistance for research, debugging and iteration. Also helped with a website for a taxi company.

Theatre Tech Director at SPIP - Lead technical production for The Clique, including lighting, projection and show control. Previously led the tech team and operated projection for Aladdin in June 2026.

Relevant skills

Project technologies: HTML, CSS, JavaScript, TypeScript, Node.js, Next.js, React Native, Expo, Web Audio, Canvas, API integration and GitHub. Python basics. AI-assisted development with ChatGPT, Claude and Gemini; experiments with Ollama and model tool calling.
